

LEARN TO SWIM AQUATIC TRAINING PROGRAMME

The most recent addition to our education portfolio is the Aquatic Training Programme, that is purposely designed to take an holistic approach to the development, sustainability and financial productivity of aquatic operations whilst simultaneously managing business critical areas.

The Learn to Swim Aquatic Training Programme brings together three of our most sought after products; business review, TLEQ Level 2 Swimming Teacher qualification and specialist operational and technical leisure industry CPD. All of which is complemented by mentoring from our Leisure Experts team.

We recognise that the success of aquatic operations extends beyond the technical expertise and teaching abilities of the team. That is why we offer comprehensive training and support, that covers both technical and operational aspects. We believe this all-encompassing approach provides a substantial return on investment, whether through financial gains, improved staff and customer retention, or feedback from members.

This year long programme is delivered through face-to-face, online and e-learning modules, with all interactions, resources and records held in our state of the art e-learning platform - TLE Learn Lab.

LEARN TO SWIM AQUATIC TRAINING PROGRAMME

HOW DOES IT WORK?

BUSINESS REVIEW

Our team of Leisure Experts begin with an in-depth analysis of the aquatic business through a comprehensive business review. This process provides TLE with the essential insights to create a customised training programme tailored to meet specific business needs.

QUALIFICATIONS

We then design the Aquatic Training Programme, incorporating both qualifications and CPD, addressing any knowledge and skill gaps unique to the business.

A variety of qualifications are offered, but the cornerstone of this programme is swimming teacher training. This is designed to integrate seamlessly with operations, enabling the team to qualify as swimming teachers without the need for a Level 1 course. This approach minimises costs and reduces time away from primary responsibilities.

CONTINUOUS PROFESSIONAL DEVELOPMENT

A schedule of off-the-shelf and bespoke technical and leisure industry CPD is created for the team - delivering on agreed areas for development identified in the business review.

This training, tailored to the current realities of the business, ensures the aquatics team gains a clear understanding of how to deliver an efficient, sustainable, and profitable programme. In turn, this empowers the leadership team to effectively manage and maintain accountability.

TLE works collaboratively to lay the foundations of an optimal aquatics programme for years to come.
